Abstract (en)  
[origin: EP2407398A2] The device (10) has collecting container i.e. plastic Jerry Can (32), including collecting openings for a fluidic waste material. A connection piece cooperates with the collecting openings and has a filling opening for filling the fluidic waste material into the collecting container. The filling opening stays in connection with waste material lines. The connection piece is formed as a quick fastener, which enables automatic attachment of the connection piece at the collecting container during arranging the collecting container in a collecting position.
