Abstract (en)

[origin: WO2010105378A1] The invention relates to an apparatus (3, 5) for producing a spatial delimitation (1). A partial bottom (7) for producing the spatial delimitation and a lever arm (9) associated with the partial bottom are provided. Two of the apparatuses can be combined to form a total bottom (13) that is located in a plane and has two partial bottoms, each lever arm of an apparatus can be fixed to the partial bottom of the other apparatus by way of a fixation apparatus (15) that is formed by the lever arms and the partial bottoms, and the two partial bottoms of the two apparatuses can be associated with each other using at least one element from the group consisting of: positively engaged, frictionally engaged, and non-positively engaged. The invention further relates to a shelving system comprising a plurality of apparatuses.
