Abstract (en)  
[origin: WO2010118758A1] The present invention relates to a container (1) having folding side walls, comprising a hinge connection (7) which virtually excludes a sagging of the bottom (2) compared to the side wall (4) even under pressure. The container (1) can be produced particularly easily and cost-effectively because the bottom (2) can be produced using an injection molding method without slide in the tool because of the special hinge connection (7), thereby enabling a simple tool design.
