Abstract (en)

[origin: WO2010105850A2] The invention relates to a test element for determining a body fluid, in particular for determining the blood glucose level, comprising a detection region which is charged with a reagent sensitive to the body fluid. According to the invention, a functional element is arranged in or adjacent to the detection region for detecting at least one status parameter for the detection region, wherein said functional element can be evaluated by means of a status measurement. The invention further relates to a method for measuring the test element.
