Abstract (en)  
[origin: WO2010107378A1] An air supply device for blowing air into a room is disclosed. The device has a casing (2) with two opposite, first and second side walls (21, 22) and a third wall there between, provided with a supply air opening (4). In the interior of the casing, there is an air feed tube (3) provided with feed openings (31-34) arranged so as to bring inlet air towards two pocket portions (25) located on each side of the supply air opening (4). The inlet air will circulate in a tornado-like air flow in the pocket portions and interact with the air from the room before it flows out through the supply air opening (4) into the room. Hereby the room climate will be improved.
