Abstract (en)  
[origin: WO2010105885A1] The invention relates to a domestic refrigeration device (1) comprising a door tray (14) and to a door tray (14) for a refrigeration device. The door tray (14) comprises a decorative strip (26), which has a profile that is u-shaped in the cross section and that has inner surfaces (33, 34), and a container (21) that is open at the top and that has an edge (27) onto which the decorative strip (26) is fitted with the u-shaped profile thereof. At least one of the inner surfaces (33, 34) is provided at least partially with a material (37) having relatively high static friction that is in contact with the container (21) and fixes the decorative strip (26) to the container (21) merely due to the static friction of said material.
