Abstract (en)
[origin: WO2010105741A1] A device for registering goods in a self-service cash register system is proposed, comprising a conveying device (2) for conveying the goods in a predefined conveying direction (3), at least one conveying means (4, 5, 10) of the conveying device onto which goods can be placed for conveying, at least one scanning device (1) which is arranged at the conveying device (2) in a locally fixed manner for registering machine-readable codes with which the goods are equipped, at least one source for emitting optical radiation in the direction of the conveying device, and at least one detector for receiving the radiation that is reflected by the goods located on the conveying device and for generating a signal that corresponds to the intensity of the reflected radiation, wherein the conveying means (10) is pervious to the optical radiation emitted by the source at least in some sections.
