Abstract (en)

[origin: EP2409592A2] The adhesive closing part has a functional layer, which defines a carrier surface (8) and is formed of a fiber system with two line elements (12a-12c, 14a, 14b) that are connected with each other and form a mesh. Another functional layer has individually formed connecting elements (30, 30'). The fiber systems are connected with each other by forming passage points (24a-24d), whose open cross section area is more than 20 percent of the corresponding carrier surface. An independent claim is also included for a method for manufacturing an adhesive closing part.
