Abstract (en)  
The roller bar (31) has a pressing element (32) movable in a plane (E1) extending in an axial direction of a plate cylinder of a rotary printing machine. A movably supported protection strip (46) i.e. finger protection strip, extending in the axial direction of the cylinder covers the pressing element. The protection strip is movable in another plane (E2) or the former plane, where the planes are arranged parallel to each other. The protection strip is moved in the latter plane in a radially linear motion directed to the plate cylinder.

Abstract (de)  
Die Erfindung betrifft eine Rollenleiste (31) zur Unterstützung einer Montage mindestens einer Druckform (16) auf der Mantelfläche eines Formzylinders (02) einer Rotationsdruckmaschine, wobei in Zuordnung zu der Rollenleiste (31) eine sich in Axialrichtung des Formzylinders (02) erstreckende Schutzleiste (46) vorgesehen ist, Die Schutzleiste (46) ist beweglich gelagert, wobei die Schutzleiste (46) in einer radial zum Formzylinder (02) gerichteten Bewegung bewegbar ist.
