Abstract (en)

[origin: EP2409925A1] The lid (2) has a lid surface having an upper side, a lower side, circumferential edge (6), and a zone (12) for a dispensing aperture delimited by a circumferential weakening profile. A lever tab (14) is fastened to the lid surface via a fastener (24). The lever tab includes a closure module to an end portion (16), where the module comprises a closure collar that is rested against an upper side of the surface, and is extended along the aperture in a sealing manner when the tab is placed on the upper side of the surface. A reclosable aperture closure is framed by the collar. An independent claim is also included for a method for manufacturing a reclosable container.
