Abstract (en)

[origin: WO2011051768A1] The invention relates to a clasp having an extending loop for a bracelet enabling the length of the bracelet to be adjusted with the clasp in the closed position. The clasp comprises for said purpose: first and second leaves (1, 2) pivotably connected relative to one another at a first end; a cover (3) pivotably connected to a second end of the first leaf (1) and arranged such as to be connected to a first strand of the bracelet; a mobile tip (4) arranged on a second end of the second leaf (2) in order to be connected to a second strand of the bracelet; an indexing means (5, 5', 6, 6') for adjusting the length of the bracelet, as well as a release means (7, 7') arranged such as to enable the mobile tip (4) to move from one indexed position to another. The second leaf (2) ends in two rectilinear rails (8, 8') along which the mobile tip (4) can slide. The indexing means (5, 5', 6, 6') is located on at least one of the rails (8, 8') of the second leaf (2) while the release means (7, 7') is arranged such as to move together with the mobile tip (4).
