Abstract (en)
[origin: WO2010109370A1] A kit comprises a shell container (C) with a vat- like containment part (CI) and an article for amusement (10, 11) inserted into the shell container (C). The article for amusement (10) comprises at least one elongated element (12, 14, 16, 18) formed by a ribbon- like element rolled up to form a loop and set in the container (C) up against the internal wall of the vat- like containment part (CI) of the container (C). The aforesaid ribbon-like element has at least one crease line (120, 140, 160, 180) so that the ribbon-like element taken out of the container can be stretched out and folded along the crease line (120, 140, 160, 180) to give rise to a rigid elongated element.
