Abstract (en)
[origin: WO2010108649A1] A dispenser for administering plate-shaped substances (1), comprising a housing (2, 2'), wherein the housing (2, 2') has a cavity (3, 3') for storing a staple (4) of the plate-shaped substances (1), wherein the housing (2, 2') forms a dispenser opening (5, 5') for the plate-shaped substances (1), which can be opened and re-closed by a lid (6, 6'), wherein the lid (6, 6') is connected to the housing (2, 2') and wherein the lid (6, 6') is connected to a pumping element (7, 7'), which can be moved together with the lid (6, 6') for transporting the plate-shaped substances (1), in regards to the objective to design and further develop a dispenser such that said dispenser is able to enable a contamination-free and reliable transport of an individual plate-shaped substance from the interior of the housing by moving the lid alone, characterized by the pumping element (7, 7') being elastically preloaded and disposed in the housing (2, 2') such that said pumping element is spaced away from the staple (4) when the dispenser opening (5, 5') is closed.
