Abstract (en)

[origin: WO2010108864A1] The invention relates to a device for inputting securities into a container. The device comprises a supply unit for supplying the securities and a stacking unit for stacking the supplied securities. The device further comprises an impeller (10c) for handling the securities. The impeller (10c) comprises a rotatably mounted base body (12c) and at least one vane (14c, 16c) which is rigidly connected to the base body (12c) at one end of a connecting region (20c, 22c). A support region (38, 40) of the vane (14c, 16c) is in contact with the outer surface of the base body (12c) when the vane (14c, 16c) exerts a force upon a security.
