Abstract (en)
[origin: WO2010108203A1] A furniture hinge (3), comprising a fitting part (4) and a hinge cup (5) that is pivotably connected thereto by way of at least one articulated lever (6), the articulated lever (6) being connected to the hinge cup (5) by way of an articulated axis (A), and further comprising a cushioning apparatus (11) which can be actuated by an actuating element (9) and is provided to cushion a relative movement between the fitting part (4) and the hinge cup (5), the actuating element (9) being mounted inside the hinge cup (5) rotatably about a rotational axis (S) extending substantially parallel to the articulated axis (A) of the hinge cup (5), and the cushioning apparatus (11) comprising at least one linear cushioning member (12) having at least one linearly displaceable plunger (14), said member being disposed on the outside of the hinge cup (5), characterized in that a transmission mechanism is provided, which converts a rotary movement of the actuating element (9) into a linear movement of the plunger (14) of the linear cushioning member (12), and the hinge cup (5) and the linear cushioning member or members (12) disposed on the hinge cup (5) are all disposed inside a cylindrical bore (B) in the furniture part (2a) in the installed position.
