Abstract (en)

[origin: WO2010108585A1] The invention relates to a control system (1) for a partition system (2) comprising individually displaceable partition elements (21), each comprising a subordinate control unit (11) and that can be arranged forming a closed partition, wherein each partition element (21) is displaceable in a guide rail (23) and comprises a drive motor (22) to this end for displacing the partition element (21). According to the invention, the subordinate control units (11) are equipped with a position data capture unit (25) capturing the position of the partition elements (21) regardless of the operating condition of the control system (1), particularly in the case of an interruption of power.
