Abstract (en)

[origin: EP2412578A1] The invention relates to a device for detachably attaching a holder (2) for an electronic device to at least one support of a headrest of a vehicle-mounted seat. The device comprises a first attachment part (11) and a second attachment part (12) to be detachably connected thereto, one of said first and said second attachment part being connectable to the holder. The device comprises connecting means (9) connected to the first and the second attachment part for detachably connecting the first attachment part to the second attachment part. In an interconnected position of said first attachment part and said second attachment part, a receiving opening is formed between said first and said second attachment part for attaching the device to the support of the headrest via said opening. The device comprises at least one operating element (15) connected to the connecting means for moving the connecting means to a release position therewith for the purpose of releasing the connection between the first attachment part and the second attachment part.
