Abstract (en)

[origin: EP2412604A1] The device has a fixed part integrated into a stock rail, and a movable part movable with respect to the fixed part. The fixed part comprises a locking piece provided with a contact surface (311) on which an end of a locking arm slides when the locking arm is in movement, where the locking arm is provided with a control branch. The locking piece is mounted against a metallic lateral wall (60) of a frame of the fixed part by a detachable fixation unit e.g. screw (70), along an axis perpendicular to the contact surface of the locking piece.
