Abstract (en)

[origin: EP2412889A1] The device has a connection element constituted by a linear profile i.e. large rail (1) comprising a flat (4) to be positioned and fixed above a carrier element on a side. A vertical jamb (3) is projected from another side of the flat perpendicular to the flat. The jamb is removed at an end of the profile on a distance to leave a plane end zone (W) of the flat. The zone is covered by a sealing instep welded or glued to plain, and length of the rail is greater than 2 meters. An independent claim is also included for a method for producing an over-roof support.
