Abstract (en)
[origin: EP2412893A2] The device (10) has a vertical support column (14) inserted into a window opening or a door opening and comprising units for supporting components. The support column is designed as a length adjustable telescopic pipe, and pipe sections (18) are fixed relative to each other by a clamping element (20) and slidable into each other. A holding arm (12) is attached at the pipe sections of the support column, and comprises an L-shaped bracket (32) with a perpendicular arm (46). A vertical catch (38) is provided opposite to the perpendicular arm to form a U-shaped seat.
