Abstract (en)

[origin: WO2010112331A2] The invention relates to a method for operating a water conducting household device, particularly a dishwashing machine, wherein a filter surface coverage of a filtration system (10, 12) connected in the hydraulic circuit of the household device is registered. According to the invention, upon registering the falling short of a specified threshold filter surface coverage, rinsing fluid is only partially discharged out of the household device.
