Abstract (en)
[origin: WO2010112459A2] The invention relates to antiperspirant compositions for personal body care, formulated as a suspension which can be sprayed with or without a propellant, containing at least one antiperspirant substance, 0 -5 wt.% free water, based on the weight of the propellant-free composition, also at least one ester, selected from the monoesters or polyesters of lactic acid, citric acid, tartaric acid or adipic acid having a bivalent, trivalent or tetravalent alcohol with 2 to 9 carbon atoms, and at least one additional cosmetic oil which is liquid under normal conditions, as a carrier. The weight fraction of at least one ester, selected from the monoesters or the polyesters of lactic acid, citric acid, tartaric acid or adipic acid comprising a bivalent, trivalent or tetravalent alcohol having 2 to 9 carbon atoms with respect to the total amount of oils, is between 13 -50 wt.%, based on the total weight of the propellant-free composition, and 0 to less than 1 wt.-% cyclomethicone, based on the total propellant free compositions,
