Abstract (en)
[origin: WO2010112384A1] The invention relates to a rear entry snowboard binding (2) having a leg support (3) that is hinged on a binding base plate (5) and pivots on the right side and on the left side that can be swiveled between a rear entry position, wherein a shoe that can be accommodated in the snowboard binding (2) can be inserted into the snowboard binding (2) from the rear to the front, and a front travel position, wherein there are locking means for blocking the leg support (3) in the travel position that comprise a locking lever (6) hinged in a pivoting manner on the rear side of the leg support (3), wherein the leg support (3) protrudes to a first side (12R) further to the outside than to the opposite second side (12L), at least in the travel position relative to a center plane (11) of the binding (2) that runs in the longitudinal direction of the binding base plate (5) and stands vertically on the binding base plate (5) centrally between the two lateral hinge points (9) of the leg support, and wherein the locking lever (6) hinged in a pivoting manner on the rear side of the leg support (3) extends laterally away from the leg support (3) having a free activation region (14).
