Abstract (en)

[origin: EP2377622A1] The container has a reservoir forming a storage volume for color fluid, and a pressure regulating unit connected with a carbon dioxide pressurized cartridge (29). The cartridge is arranged at a collecting unit (33), and a tapping unit (39) is positioned relative to the collecting unit for tapping the cartridge. The tapping unit is movable over a user-side operatable adjusting unit (47). A sealing section seals an outlet opening (49) attached to the cartridge by a tapping unit. The collecting unit is connected with the regulating unit in a fluidic manner. An independent claim is also included for a method for pressure loading of a disposable container.
