Abstract (en)

[origin: WO2010112307A1] The invention relates to an apparatus for reshaping plastic preforms into plastic containers (10). Said apparatus comprises a plurality of blow-molding stations (4) that each have at least one receptacle space, within which the plastic preforms can be expanded into the plastic containers. The apparatus also comprises a conveying device (2) that conveys the containers along at least one specified travel path, wherein the apparatus has a plurality of heating devices (6) that are arranged along the travel path of each container, upstream of the blow-molding stations (4), wherein at least one heating device (6) is allocated to at least one blow-molding station (4).
