Abstract (en)
[origin: WO2010112724A1] An installation for packaging components in the form of strips, each of the components having a through-aperture, while the strips consist of a stack of components, characterized in that it comprises: a stacking device composed of a plurality of pins (4) able to take, by guided sliding, the apertures in the components fitted on a mount plate (5) placed underneath a charging plate (6) provided with perforations opposite the pins fitted on the plate (5) and in which said pins are inserted, free to move translationally vertically, and with a device for manoeuvring the mount (5) translationally vertically. A pressing device composed of a support plate, arranged horizontally above the plate (6) and provided with through-perforations able to take, by sliding freely, the pins (4), held by the mount plate (5), of a printed circuit board on which the vertical compression force of a mechanism is exerted and which is secured to the support plate by means of posts.
