Abstract (en)
[origin: WO2010114452A1] The present invention relates to a device for handling a number of sleeves (1, 2, 3), preferably paperboard sleeves, before, during and after rolling up of a paper web on each one thereof, in which a body (4) of a length substantially corresponding to the total length or width of the sleeves (1, 2, 3) is inserted in the sleeves (1, 2, 3) and is expandable for pressing the circumferential surface or wall of the body (4) wholly or partly against the inside of the sleeves (1, 2, 3) and thereafter for holding together the sleeves (1, 2, 3) before and during rolling up of the paper webs on the sleeves (1, 2, 3) and the paper rolls thus realised thereon, the body (4) being hose-shaped cylindrical, the ends of the hose-shaped cylindrical body (4) being sealed with an air seal and at least one end being provided with a valve (5) for supplying a medium for expansion of the body (4).
