Abstract (en)
[origin: US2010251477A1] A sink assembly provides an enhanced overflow system for an under-counter mountable sink. The sink has an overflow cutout with an open top formed adjacent an upper rim of the basin of the sink. When the sink is mounted to the bottom surface of a counter top, the sink and counter together form an overflow opening, thereby permitting the overflow to be more easily concealed and increasing the fill capacity of the sink. Methods of installing such sink assemblies are also disclosed.
