Abstract (en)

[origin: WO2010112463A1] The invention relates to an operating device for a household appliance (1) having a control element (11) that is designed to adjust operating conditions of the household device (1) by activation, wherein the control element (11) can be moved along a guide rail (10) of the operating device (7), along which at least two different positions (14 to 17) are specified, to which at least one specific operating partial unit (3 to 6) of the household device (1) is defined for selection, wherein the positions (14 to 17) for selection of the respectively allocated operating partial unit (3 to 6) can be approached by the control element (11). The invention also relates to a household device for preparing food having an operating device of said kind and to a method for operating said household device by means of an operating device.
