Abstract (en)
[origin: WO2010112293A2] The invention relates to a refrigeration device, in particular a household refrigerator, comprising a cooling chamber and at least one shelf for the cooled products stored in the cooling chamber between the inside walls of the cooling chamber. In order to provide a refrigerator having improved storage capacity for products to be cooled, the shelf has a first planar shelf surface section and a second planar shelf surface section that is vertically offset from the first planar shelf surface section.
