Abstract (en)

[origin: WO2010112264A1] The present invention relates to a method and to a device (1) for creating a process model (2). The process model (2) has great expressive power and is intuitively understandable for a human user and can also be processed by a machine. Creation of the process model (2) is carried out in the present invention by providing the concrete process model, a process meta model, and a mapping of concrete process steps to the abstract process steps of the meta model. It is particularly advantageous that the defined process meta model can be reused in relation to further domain-specific, concrete process models. With the present invention, step-for-step instructions can be semantically enriched, structured, and processed.
