Abstract (en)

[origin: WO2010112356A1] The invention relates to a compression method that divides at least one informational unit, comprising one or more characters according to a first base type, into sections of a second base type and compresses said sections according to specified compression instructions for the second base type. Said method achieves an increased rate of compression. The informational elements are, for example, part of an XML language. In addition to the compression method, the invention also relates to the corresponding compression unit, decompression method and decompression unit. The invention can be applied in the area of initialization of end devices, such as in systems engineering or in the IT consumer industry.
