Abstract (en)

[origin: EP2415571A2] A machine for machining wooden frames (2) or similar has a supporting device (19) defining a first supporting surface (P2) for at least one frame (2); a machining head (14) for machining the frame (2); and a transfer assembly (25) for transferring the frame (2) to and/or from the first supporting surface (P2); the transfer assembly (25) having a second supporting surface (P3), which rotates between two work positions, in which the first and second supporting surface (P2, P3) are coplanar with each other, and tilted with respect to each other respectively.
