Abstract (en)

[origin: EP2415946A2] The fastening structure has a connection portion (1) comprising a resilient projection (1.3) provided in side surface of two neighboring screeds (2). The resilient projection is formed with the groove (2.1). The connection portion is provided between the neighboring screeds. A screw or nail is made to pass through the groove to connect the screed to the sub-construction (3). The width of groove is three times as large as the depth of the groove. The groove is bend at 50°O.
