Abstract (en)  
[origin: EP2415948A2] The board has a handle (2) formed on a top surface (4) of a plate-like base body (1), and comprising handle base parts (8). Multiple water guiding paths (7) are formed on the top surface of the base body, and form a defined water drain. The water guiding paths extend upwardly toward the handle base parts, and are projected from peripheral side edges (5) of the base body. The water guiding paths discharge hole-like openings (9) penetrating longitudinally into the respective handle base parts and provide a path to a guidance for storing contaminated water.
