Abstract (en)

[origin: EP2416061A2] The module (102) has a parabolic reflector (114) oriented such that a reflecting surface of the parabolic reflector and a reflecting surface of an elliptical reflector (104) are oriented in a same direction with respect to emission direction of light rays from a light source (106) such as LED type light source. A flat or curved reflector (118) has a reflecting surface passing via a focal point (112) of the elliptical reflector and oriented to reflect the light rays, emitted by the light source and reflected by the elliptical reflector, toward the parabolic reflector. An independent claim is also included for a lighting device comprising LED type light sources.
