Abstract (en)
[origin: EP2416066A2] The wall (41) has a baffle plate (42) rearward provided by a reflector (56). A safety disk (43) is supported under a free space of an air gap (62) and rearward connected with a receiver of the baffle plate in a frame (45). A U-profile is mounted on end edges (44) of the baffle plate. An arrangement irradiates a lighting unit (48) in the baffle plate parallel to a main plane, where the lighting unit is arranged on a U-shaped yoke (47) longitudinal to the end edges of the baffle plate. A continuous or discontinuous peripheral support (60) is provided between a guide plate and the safety disk.
