Abstract (en)
[origin: EP2416098A2] A door (20) for a refrigerator cabinet (10), comprising a frame (21) destined to delimit an access (12) passage of the refrigerator cabinet (10) and at least two panels (30) singly destined to close a respective portion of the access (12) passage, each of which panels (30) is hinged to at least a respective support element (33) associated to the frame (21), such as to be able to rotate with respect to the frame (21) between a closed position and an open position of the respective portion of the access (12). The support element (33) of each panel (30) is slidably coupled to the frame (21) in such a way that the respective panel (30) can slide with respect to the frame (21) between the closed position and a further open position of the respective portion of the access (12) passage.
