Abstract (en)

[origin: WO2010115733A1] The invention relates to a method for operating a cleaning device using a drive motor that drives at least one cleaning tool. In order to further develop the method such that the degree of wear of the cleaning tool can be determined in a simple manner, even in the case of replacement of the cleaning tool, according to the invention a wear value is stored in a memory element of the cleaning tool, said value corresponding to the degree of wear of the cleaning tool present at the time the wear value was stored, and said wear value is continually updated. The invention furthermore relates to a cleaning device and to a cleaning tool for performing said method.
