Abstract (en)
[origin: DE102009016686A1] The window pane (10) has an electrical functional element (12) i.e. electrical resistance heater, and a controller for controlling the electrical functional element. A holding device (20) for the controller is provided at a window pane edge (18). A locking connection element (22) engages the controller. An electrical contact element i.e. cable-plug-connector, connects a high-voltage output of the controller with a high-voltage input (14) of the functional element and is designed as locking connection between a contact surface of the controller and a contact surface (16) of the holding device.
