Abstract (en)

[origin: EP2239391A1] A reinforcing element (10) for concrete construction comprising a rod-shaped member (11) having a cross-sectional enlargement on at least one end thereof. The rod shaped member (11) comprises an elbow portion (12) on said at least one end being embedded in a protection block (15), thereby forming said enlargement. The method for producing the reinforcing element is also provided.
