Abstract (en)
[origin: WO2010115402A1] The invention relates to a pipe for conducting through or discharging wet gases, particularly for conducting through or discharging flue gases subjected to wet scrubbing. At the inside wall, the pipe has a helically shaped guide element. As a result of said design, the drop entrainment and/or the drop ejection of pipe is reduced. Furthermore, a guide element for installation in such a pipe is described. The pipe is preferably a wet chimney.
