Abstract (en)

[origin: WO2010115682A2] The invention relates to a refrigeration device, in particular a domestic refrigeration device, with an ice maker (7) located in a refrigerating compartment (3) to produce ice cubes and equipped with an ice cube tray (11) that can be filled with water, said ice cube tray being heatable by means of a heating device (44) in order to melt the surface layers of ice cubes produced in the ice cube tray (11). According to the invention, the ice cube tray (11) is designed to be thermally coupled with the heating device (44) via thermal bridges (49, 51), whereupon recesses (a) are fashioned between the thermal bridges (49, 51).
