Abstract (en)

[origin: WO2010115605A1] The invention relates to a fuel cell (1) comprising a membrane electrode assembly (2). The membrane electrode assembly (2) is arranged between two bipolar plates (5, 6) and is connected to a sealing element (3). The sealing element (3) and the bipolar plates (5, 6) contact each other while forming a contact region (10). A sliding surface (11), which can be used to apply transverse stress (15) to the membrane electrode assembly (2) arranged between the two bipolar plates (5, 6) when the two bipolar plates (5, 6) are pressed together, is provided in the contact region (10). The invention further relates to a fuel cell stack comprising such a fuel cell (1) and to a method for sealing a fuel cell (1).
