Abstract (en)
[origin: EP2417865A2] There is provided a buckle device for length adjustment including a band unit in which multiple saw-teeth are formed; a base unit configured to slidably guide the band unit when the band unit enters the base unit or exit therefrom; and a control unit including a locking unit and a lever unit provided in the base unit to be rotatable. Here, an end of the locking unit and an end of the lever unit are provided at both ends of the base unit, respectively and the other end of the lever unit is cross-linked with the other end of the locking unit at the both ends, so that according to rotation of the lever unit, the locking unit is engaged with or disengaged from one or more saw-teeth.
