Abstract (en)

[origin: EP2418319A1] The shaking device (1) has two eccentric drives connected with a roller (2) in a direction of a roller axis, and motors for driving the eccentric drives, where the eccentric drives are supported in and/or at a common and movable device e.g. carriage, stand and frame. A single-piece shaking rod (9) directly or indirectly connects the rollers and the movable device with each other, and a clampable ball joint (17) is provided in the connection (V) between the roller and the movable device. The ball joint is arranged at a side of the shaking rod.
