Abstract (en)

[origin: EP2418335A2] The system has a window (10) framed in a frame (20). A portion of the frame is arranged into a corresponding groove of a post (31) extending in a longitudinal direction. Another portion of the frame is detachably defined by a post lock to another post (32). A side of the frame lies opposite to the former portion. The frame is sealed against the posts by a brush seal made of plastic material, and/or the window is sealed against the frame by a plastic seal i.e. rubber seal. A center post comprises a longitudinally extending double groove. An independent claim is also included for a method for producing a variable window facade for a temporary building.
