Abstract (en)

[origin: WO2010118892A1] The invention relates to a lifting device for lifting loads, in particular vehicles, comprising load receiving means (12) which can be raised and lowered by means of at least one lifting element (14), and a drive device (26) which is controlled by a drive control (24). Said lifting device is characterised in that an energy accumulator (31), which supplies the drive control (24) and the drive device (26) with energy, is provided on the lifting element (14), the load receiving means (12) or inside a working area of the load receiving means (12) or the lifting element (14).
