Abstract (en)  
[origin: WO2010119022A1] According to the invention there is provided polymer particles comprising (i) a hydrophobically modified polymer having a lower critical solution temperature of from 5 to 60 °C (particularly polyvinyl alcohol backbone having one or more hydrocarbyl group substituents of from C4 to C22 carbon chain length); the polymer particle is provided as a polymer matrix comprising multiple discrete benefit agent (ii) entities embedded in the polymer matrix, wherein, the ratio of (i) to (ii) is from 1:50 to 99:1 parts by weight; also provided are surfactant compositions comprising the polymer particles, a process to make the polymer particles and to the use of the polymer particles to deliver a benefit agent to fabric and/or to a wash or rinse medium during a wash process.
