Abstract (en)

[origin: WO2010118939A1] The invention relates to a condensation dryer (1) having a drying chamber (2) for objects to be dried, a process air channel (10) in which a heater (11) for heating the process air and a fan (12) for delivering the process air is located, a component (5,7, 16, 27,) of a condensate pan (9) that can be loaded with lint, a condensate collection vessel (25), a rinsing device (27, 28) for rinsing lint from the component (5, 7, 16, 27) by means of condensate from the condensate collection vessel (25), wherein a first filter device (3) having a filter bag (33) for collecting the rinsed lint and a condensate pump (24) for delivering the condensate into the condensate collection vessel (25) are connected downstream of the component (5, 7, 16, 27). The filter bag (33) comprises a nonwoven fabric.
